

MAP CLASSROOM

Our class is called “MAP” (Productive Learning Method). We are 13 students, 2 girls and 11 boys. We have 3 teachers, Rodolfo, Lourdes and Sara. Our class is different than the other classes of the school. We use a different method of learning. For example, Tuesday and Thursday morning we come to a company (practical place).

Each student choose a professional field (carpenter, shop assistant, hairdresser...) and we learn in the

the labor market

Monday,

class. These

“communication

experience in

company an important things about and a lot of practical abilities.

Wednesday and Friday we work in days always started the day with the session”. We talk about our practical places, debates, read

articles, reports... When we end communication session we work in a curricular contents (maths, science, English activities).We have 13 computers, a computer for each of us, so, we do the curricular contents always with computer.

We also have time to develop our product. The product is the construction of a physical item by ourselves and it must related to our professional field. For example, if you are in a carpentry, you can do a table, cupboard or something like that. Each student make his product.

Tuesday afternoon we making repairs in the own school (arrange blackboards, tables, chairs...) and Monday afternoon we go to the pool with David. He's our physical education teacher.

We never do exams but at the end of the quarter we make an oral presentation where we show the product and we explain how we have done. We also show our portafolio with all the curricular activities and finally, we explain our experience in the company.
